

## A Guide for At-Home Learning

The coronavirus (COVID-19) pandemic has changed the way we work, learn, and connect. This global event presents unique challenges for all families and educators as we adjust to new norms and come to understand what this means for elementary and secondary learners. The Oregon Department of Education (ODE) is committed to supporting families and caregivers during these difficult times of social distancing and school closures. While school districts in Oregon will vary in how they provide assigned work and [resources](#) for at-home learning, caregivers can support their children in a variety of ways. While it is important to acknowledge that at-home learning does entail changing some family routines, this document intends to provide some recommendations to help with this transition.

### Key points to remember:

- **Student, family, and community physical and emotional [well-being](#) come first.** Learning only happens when children and young people feel happy, safe, and secure. Be patient with yourself and your family--this is new for everyone. Provide your children with reassurance and love. As schools close, and the news cycle is dominated by information about COVID-19, children will be frightened and confused. Take care of your [child's emotional and health](#) needs during this time. If any of your family is sick, that is the number one priority, not at-home learning.
- **Communicate openly and honestly about COVID-19.** Acknowledge and discuss changes and challenges that may have occurred in your family and routines. Caregivers should stay positive and reassure children that health and school officials are working hard to make sure everyone stays safe and healthy. However, children also need factual, age-appropriate information about disease risk and concrete instruction about how to prevent spread of the disease. For more information, see [CDC's Guide for Talking to Children](#).
- **Do not neglect your own needs.** Make sure to attend to your physical and mental health needs, including maintaining a healthy diet, staying physically active, and connecting with others about your feelings. Reach out to available community networks and resources. Read about ways to support your family with their stress and trauma [here](#).
- **No need to recreate school.** Trying to create school-like learning in a home setting may frustrate teachers, students, and families. Continue doing what you already do: be a learning partner to your child. You don't need to be an expert in any subject area or in any learning strategy! Engage with your child to share and connect learning to your home lives, interests, home language, and cultural identities — these moments are just as important. Parents are not expected to become teachers, though they will likely be needed to serve as facilitators of learning, particularly for younger students.
- **Use technology intentionally.** It is important for friends, family, teachers, school staff, and other community members to stay in virtual contact with each other — but consider variety, including exercise, reading, and learning life skills [away from screens](#). For a list of digital resources, visit [Oregon Open Learning on OER Commons](#).
- **Connect with your community and school.** Every school and district will have different capacity to support at-home learning and provide assigned work. However, caregivers and family should always check for [support](#), [resources](#), and [guidance](#) from community groups and your school district. You are not in this alone.

## Some recommendations:

- **Spark simple conversation.** Support your child’s thinking with questions. Open-ended questions will stimulate more conversation than questions that can be answered with a yes or no. Whenever possible, refrain from judging your child’s thinking by asking them to clarify or justify. And remember, even boredom has value — it can spark creativity and problem-solving.
  - Read an article or [view a documentary](#) together and ask questions like “what do you notice?” or “what do you wonder?”.
  - Use [books](#), [images](#), or [online resources](#) to spark deeper conversations.
  - Ask about and share feelings with family members about recent changes in routine.
- **Maintain some routine.** Consider maintaining [a routine](#) because the [consistency of a schedule](#) reduces anxiety and stress. Talk with your children about their learning and goals — and remember to take regular breaks. What is a realistic time commitment for at-home learning in your family?
  - Wake up, get dressed, and have breakfast at the same time each day.
  - Identify a time and place for assigned school work.
  - Get creative about meeting [physical activity needs](#) of all family members.
- **Focus on learning in everyday life.** Many activities you already do around the home support [meaningful learning](#), including paid and unpaid work. Try using a typical activity, such as preparing food or cleaning up, to encourage new learning or to develop a new skill. Similarly, there may be ways to engage your child as part of your own paid work.
  - Share your work process by thinking out loud.
  - Involve your child in a small part of a bigger daily activity (e.g. laundry, cooking, cleaning).
  - Help your child plan a day or a meal or a family walk.
  - Ask your child to create a video or written “how to” manual to share what they learned.
- **Build from the interests and choices of your children.** We know children are more engaged when they have choice in deciding what they learn and when the [content is relevant to their lives](#). You know your child — ask about interests that they do not always get to pursue in school. Are there projects, ideas, or collaborations that might connect their interests to learning?
  - [Create an art project with recycled materials](#), using your child’s interests as a theme.
  - Re-imagine your outdoor and/or indoor spaces as an adventurer to spark imagination.
  - Keep an individual and/or family journal to record ideas, events, feelings.
  - [Invent a game](#) to play with your family or online friends.
